

**THE EMERGENCY BLUE LIGHT SPEED LIMITER  
THE "JEWEL IN THE CROWN" IN OUR SPEED LIMITER PORTFOLIO.**

Until now due to the necessity of traveling at high speeds, Emergency Vehicles have been excluded from reaping the benefits of Speed Limiters. It is an undisputed fact that controlling a vehicles top speed and stopping over revving, substantially reduces fuel consumption and maintenance costs. When you add the further benefits of large reductions in Co2 emissions and help in complying with "Duty of Care Litigation", the Emergency Light Limiter becomes a "must have" option.

**System Operation:** The way the system works is simple. When installed, the Limiter sets the top speed for normal vehicle use. Once the Emergency Light is activated, it immediately cancels the Limiter, allowing unrestricted speed, so it can respond to any Emergency.

When the Emergency Light is deactivated it automatically reverts to the original set speed.

**Options:** This is a multifunction limiter and can provide Top Speed, RPM and Reverse Speed limitation all switched on and off through the Emergency Light switch if required. It already has the approval of several vehicle manufacturers and converters, and is in service with various police, ambulance and fire authorities around the world. Once again, Autokontrol has developed another ground breaking product that makes driving more economical and safer.

**Warranty:** The system requires no maintenance therefore we offer a 3 year or 100,000 mile warranty.
