

REVERSING SPEED LIMITER

What is a Reversing Speed Limiter?

There appears to have been a significant increase in the number of accidents being caused by vehicles being driven too fast when reversing.

As a result, we have had numerous requests from customers asking if we can provide a product to help reduce this problem.

Our new **“REVERSE SPEED LIMITER”** does exactly that, it can be set to a very low speed which comes into operation when reverse gear is engaged.

Normally we pre-set the speed to 6mph (9.5kph) but this can be adjusted if required, and by restricting speed we can control over revving which in turn reduces fuel consumption and maintenance costs.

This product can be used on most commercial and private vehicles. It takes approximately one hour to fit, and comes with a three year parts warranty.

At a time when “Health & Safety” and compliance with “Duty of Care Legislation” is at the top of most company’s agendas, the reversing limiter is another Autokontrol Speed Control System making driving safer for all concerned.

Warranty:

The system requires no maintenance and comes with a standard 3 years parts warranty.
