

TRAILER SPEED CONTROL SYSTEM

What is a Trailer Speed Control System?

People who do not regularly operate vehicles while towing a trailer, often don't understand the added precautions which need to be taken such as reducing travel speed, increased turning circles, the effect of crosswinds, rain and the difficulty in trying to reverse a trailer.

Autokontrol has developed the solution "The Trailer System". It's a unique multifunctional system that operates by reducing the speed of the vehicle when the trailer is attached, but allows the vehicle to return to its previous calibrated maximum speed limit upon disconnection.

Assuring a higher level of safety helps companies to comply with "Duty of Care Legislation" as well as the obvious benefits of substantial fuel savings and reducing CO2 emissions.

As a result many operators today set their vehicle's top speed with & without a trailer fitted by installing an Autokontrol DbW speed Limiter.

Furthermore, this product is capable of working in conjunction with any of the manufacturers factory set limiters.
