

Autokontrol

INTRODUCING THE NEW INTELLIGENT SPEED CONTROL

The "Multispeed" speed limiter from Autokontrol developed with dynamic functionality.

If you need to totally control your vehicles and drivers in all road speed limits this is the product for your operation plus all the benefits of accurate GPRS

System Overview

The ultimate speed limiter system for any vehicle with an engine management system. The multispeed limiter controls a vehicles top speed on any road anywhere subject to the correct and availability of GPRS and mapping. It can also supply all the telematics information required by the owner/vehicle operator.

The system incorporates absolute accurate GPRS information.

System Operation

The Multispeed limiter is controlled by a solid state, advanced mobile digital service module, which accurately monitors the vehicles position. The correct speed limit for that particular location is then provided to control the vehicles speed. Refresh rate is around 300mS

Options

- * GPRS functionality
- * Complete turnkey speed control package

Design Philosophy for Security and Safety

- *The unit is embedded in the vehicle and is ignition powered
- * No OBD connection thus eliminating the risk of voiding manufacturers warranty

Important Note

The above system uses the Autokontrol Drive by Wire product (Patented) the "Most internationally recognised system in the world" which in turn does not invalidate vehicle manufacturers warranty
